

Hedwig Eats – A tool for families with children diagnosed with PDE

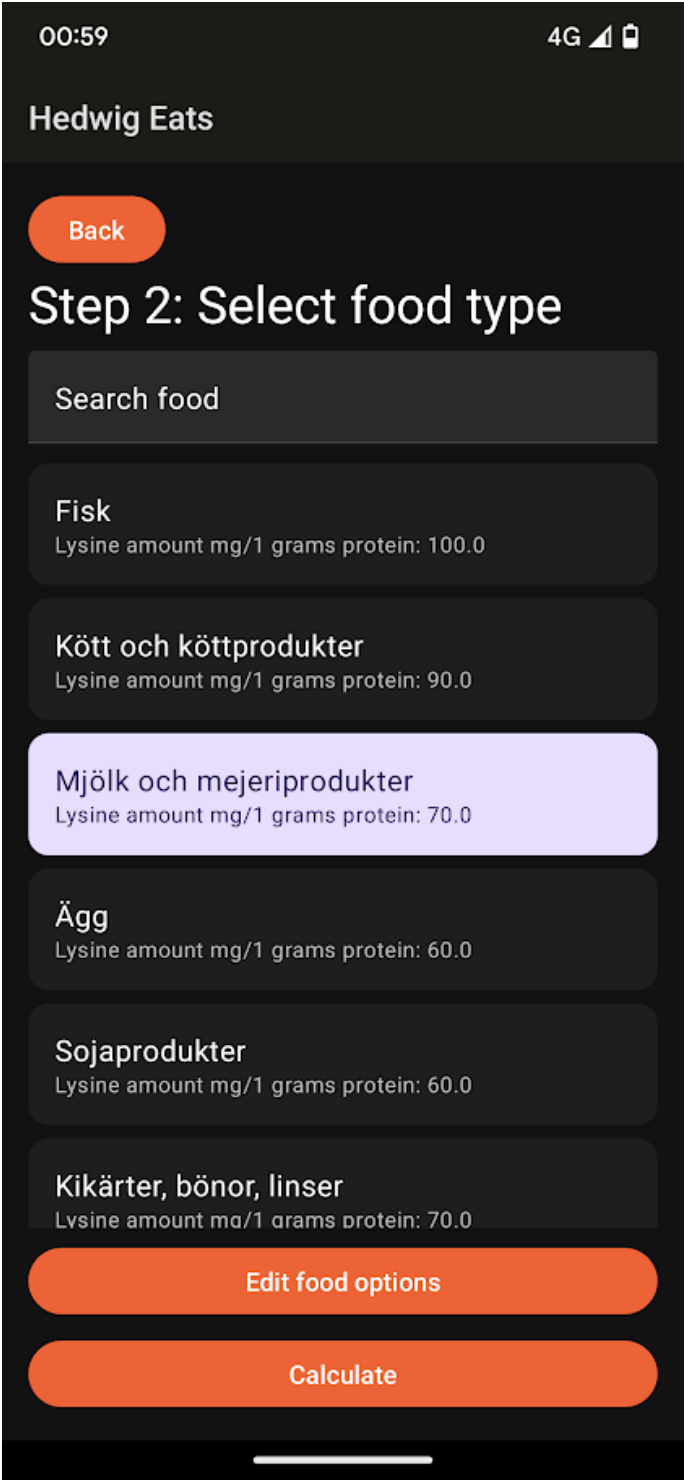

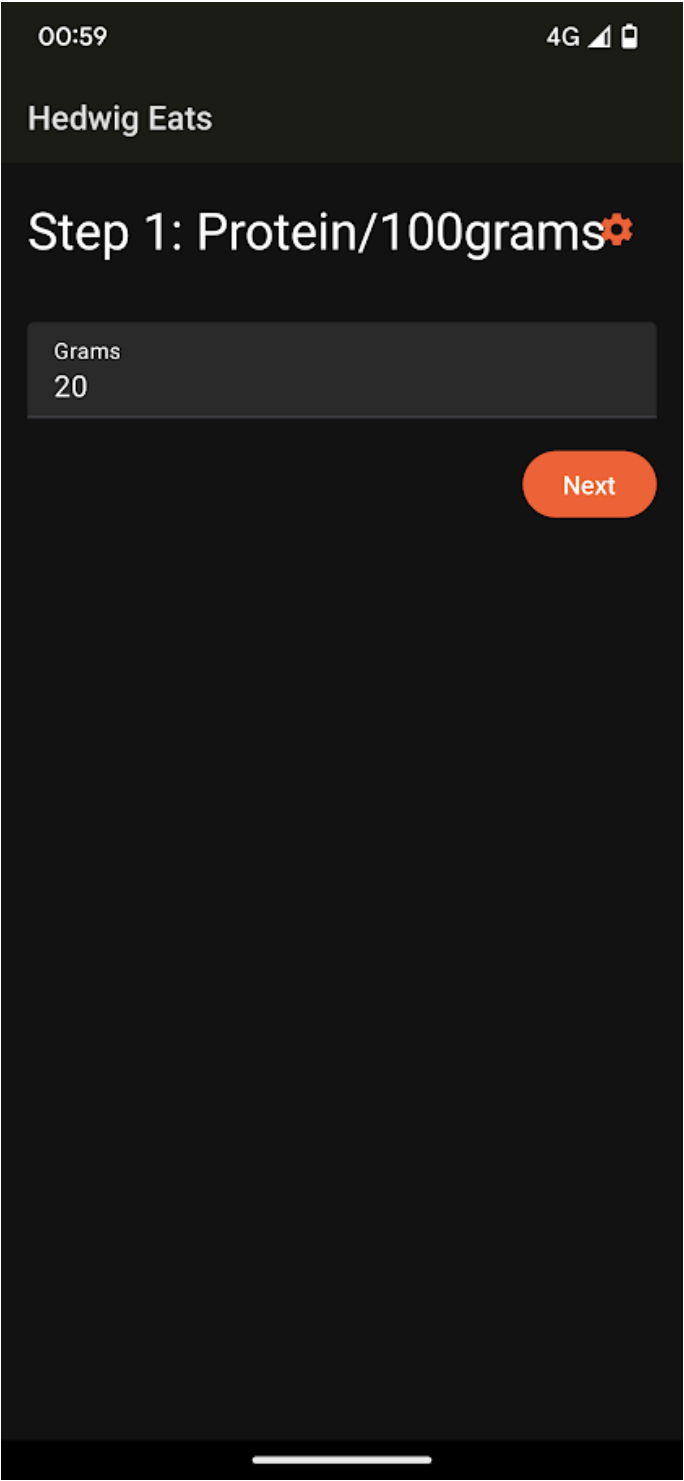

Hedwig Eats is an app created to help parents of children diagnosed with the rare condition Pyridoxine-Dependent Epilepsy (PDE). It simplifies the calculation of how much food a child can eat, based on lysine/protein content in different foods.

Key Features:

- Calculates safe food amounts based on grams, food type and lysine value
- Predefined and customizable food types
- Available in six languages: Swedish, English, Spanish, French, Hindi, Arabic
- No login, no tracking, no ads
- Available as a web app and Android app (currently in closed beta)
